

Introduction

1 Why is there data analytics?

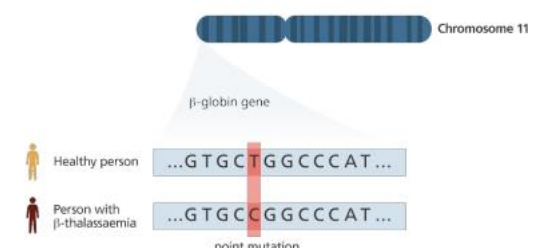

- There's lots of data collected & warehoused in different ways:
 - **Data from the internet**, this is what we produce ourselves every day by surfing on the internet, this is increasing every day as more people are joining social media (e.g. Facebook, Google, Amazon)
 - **Biological data**, from (medical) research (e.g. DNA sequences, protein structures)
 - **Bank transaction data**, coming from all the transactions we make when buying stuff (e.g. Alipay, Paypal)
 - **Mobile data**, coming from the providers (e.g. CSL, China Mobile)
- It's becoming easier and cheaper to store data since computers are more powerful & cheaper than before
- It's useful:
 - Data can be aggregated
 - Hypotheses can be generated
 - Leads to conclusions that can be used to create more personnel advertisements

2 What's the use of data analysis in genomics & precision medicine?

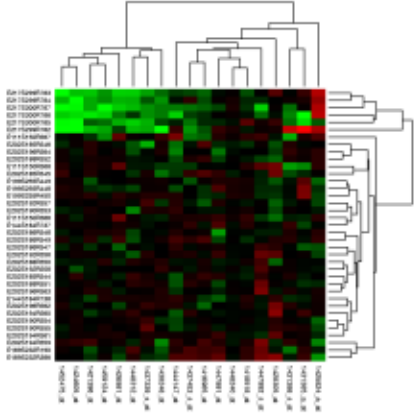

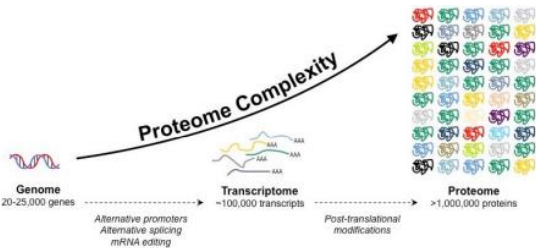

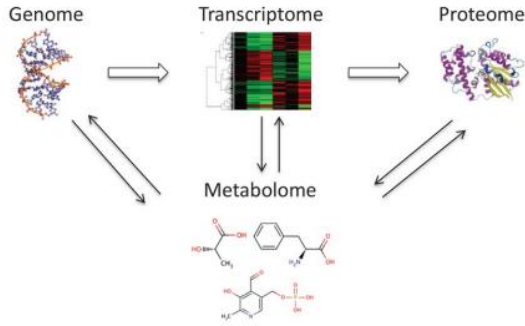

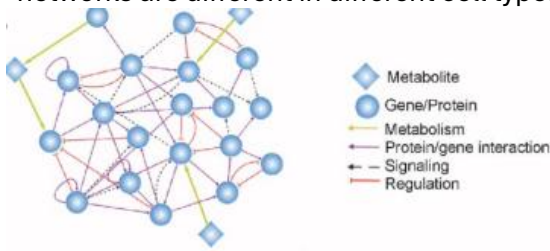

- We already have the data and the analysis is very useful
- The sequencing cost has decreased dramatically (\$100M in 2001 vs. \$1K in 2015)
- Single cell data accumulates
- Global efforts in building biobank increase

3 Data we have to measure a person

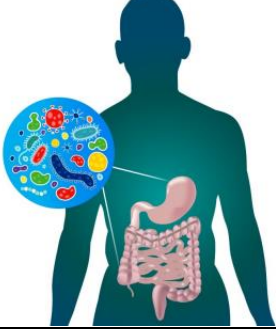

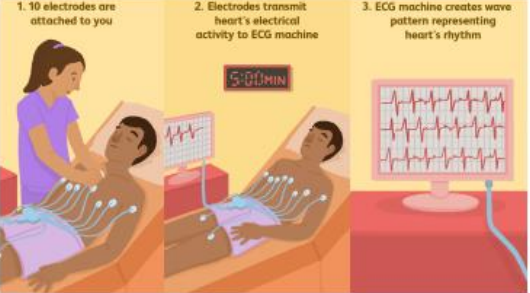

- All kinds of data ordered from smallest to highest level, meaning going from the isolated micro-world of genomics to the interacted macro-world off infectious diseases:

Data	Example
Gene & mutations	Point mutations in the base pairs of DNA (T-C instead of T-A) 

<p>Gene expression (transcriptome)</p>	<p>Analysis on how much a gene is expressed or how much copies there are</p> 
<p>Proteome</p>	<p>These are the final molecules in our body and can be measured to see if a person has a certain disease or not</p> 
<p>Metabolome</p>	<p>complete set of small-molecule chemicals in a biological sample, influenced by genome & environment</p> 
<p>Molecular network & cellular network</p>	<p>-Within the cell molecules can pass some signals & communicate with each other -networks are different in different cell types</p> 
<p>Microbiome</p>	<p>Oral & gut microbes/viruses that live together with us</p>

																																		
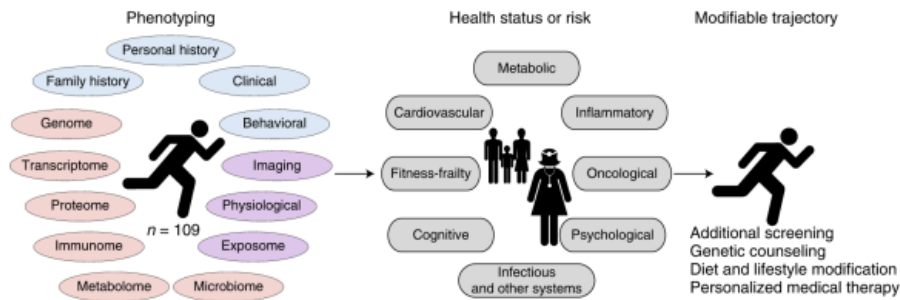

Organ	Biomedical imaging is used to measure whether our organs are normal or not																																	
Hospital test	<p>Blood test to discover diseases or deviations from normal values</p> <table border="1" data-bbox="837 763 1233 1133"> <thead> <tr> <th>Blood Test</th> <th>Result</th> <th>Normal Value</th> </tr> </thead> <tbody> <tr> <td>WBCs (billion/L)</td> <td>8.00</td> <td>3.5 to 10.5</td> </tr> <tr> <td>Neutrophils (%)</td> <td>62</td> <td>40 to 70</td> </tr> <tr> <td>Lymphocytes (%)</td> <td>28</td> <td>25 to 45</td> </tr> <tr> <td>Monocytes (%)</td> <td>10</td> <td>2 to 8</td> </tr> <tr> <td>Eosinophils (%)</td> <td>1</td> <td>1 to 5</td> </tr> <tr> <td>Basophils (%)</td> <td>0</td> <td>0 to 1</td> </tr> <tr> <td>RBCs (trillion/L)</td> <td>3.84</td> <td>4.3 to 5.7</td> </tr> <tr> <td>Hb (g/dL)</td> <td>11.7</td> <td>13 to 17</td> </tr> <tr> <td>Hematocrit (%)</td> <td>37</td> <td>37 to 52</td> </tr> <tr> <td>Platelets (billion/L)</td> <td>262</td> <td>150 to 450</td> </tr> </tbody> </table>	Blood Test	Result	Normal Value	WBCs (billion/L)	8.00	3.5 to 10.5	Neutrophils (%)	62	40 to 70	Lymphocytes (%)	28	25 to 45	Monocytes (%)	10	2 to 8	Eosinophils (%)	1	1 to 5	Basophils (%)	0	0 to 1	RBCs (trillion/L)	3.84	4.3 to 5.7	Hb (g/dL)	11.7	13 to 17	Hematocrit (%)	37	37 to 52	Platelets (billion/L)	262	150 to 450
Blood Test	Result	Normal Value																																
WBCs (billion/L)	8.00	3.5 to 10.5																																
Neutrophils (%)	62	40 to 70																																
Lymphocytes (%)	28	25 to 45																																
Monocytes (%)	10	2 to 8																																
Eosinophils (%)	1	1 to 5																																
Basophils (%)	0	0 to 1																																
RBCs (trillion/L)	3.84	4.3 to 5.7																																
Hb (g/dL)	11.7	13 to 17																																
Hematocrit (%)	37	37 to 52																																
Platelets (billion/L)	262	150 to 450																																
Electrocardiography = EGC	<p>process of producing an electrocardiogram which is a recording of the heart's electrical activity through repeated cardiac cycles</p> 																																	
Demographic info	<ul style="list-style-type: none"> -Age -Gender -Location: air pollution, the higher the pollution in your environment the higher the chance you acquire some sort of lung disease 																																	
Drug & disease history	Overuse may have irreversible effects on your body																																	

<p>Personal statement & doctors diagnosis</p>	
<p>Living habit</p>	<p>Amount of exercise your perform in your daily life</p>
<p>Diet</p>	<p>Healthy food, or at least a balanced diet will give you a healthier life</p>
<p>Family history</p>	<p>-Digestion problems may be passed on to offspring -Breast cancer</p>
<p>Communication & social media data</p>	<p>Friends with depression will increase the risk of getting depressed yourself</p>
<p>Travel history</p>	<p>Global pandemic</p>

- Longitudinal big data approach for precision health
 - Process:
 - Phenotyping: test all the data types mentioned above
 - Health status or risk: draw a conclusion from all the data
 - Modifiable trajectory:
 - Additional screening
 - Genetic counselling
 - Diet & lifestyle modification
 - Personalized medical therapy

- Specific assays
 - Clinical survey
 - Omics
 - System-based
 - Sensor tests

Specific assays

Clinical/Survey	Omics
Demographic and health history (quarterly)	Genome ($n = 88$, once)
Anthropometric (quarterly)	Transcriptome (PBMCs) (quarterly)
iPOP participation survey (yearly)	Proteome (plasma, SWATH-MS) (quarterly)
Food survey (quarterly)	Immunome (serum, immunoassay) (quarterly)
International Physical Activity Questionnaire (IPAQ) (quarterly)	Metabolome (plasma, LC-MS) (quarterly)
Perceived Stress Scale (PSS-10) (quarterly)	Microbiome (stool, 16s) (quarterly)
Stress and Adversity Inventory (STRAIN) (once)	

Standard test Enhanced test Emerging test

System-based	Sensor
Fasting glucose, HbA1C, insulin (quarterly)	Wearable physiology and activity monitor ($n = 71$)
OGTT ($n = 94$, yearly)	Continuous glucose monitors ($n = 30$)
SSPG ($n = 69$, once)	
β -cell functional assessment ($n = 89$, yearly)	
Lipids (basic panel) (quarterly)	
Metabolic panel (quarterly)	
CBC with differential (quarterly)	
hsCRP, IgM (quarterly)	
CVD markers ($n = 43$, once)	
Echocardiography, vascular ultrasound ($n = 43$, once)	
Cardiopulmonary maximal exercise ($n = 36$, once)	

- Illustration of a data analysis to measure a person:

BMEG3105 - Data analytics for personalized genomics & precision medicine

Professor: Yu Li

Scribing L1 – Introduction

Wed 04-0-2024

4 Goal of this course

- Learn the fundamental concepts of data analysis
- Know the various data in genomics & medicine
- Apply data analytic techniques to process the data & resolve problems in biology
